Global ISDN
High speed and high quality using end-to-end digital connectivity

Our many years of experience and focus on Quality of Service (QoS) allow us to be a market leader in delivering high quality services to Mobile and Fixed operators around the globe. ISDN enables customers to send data and voice simultaneously using end-to-end digital connectivity.

The Integrated Services Digital Network (ISDN) carries data at very high speeds and performs multiple tasks simultaneously. It enables the user conduct quick file transfers, easily and accurately. Telenor Global Services provides ISDN connections to numerous countries both to fixed and mobile destinations.

The ISDN network carries transmission of voice, data and video signals at high speeds and improved quality for fast Internet access and CLI. ISDN provides the user full advantage of the high-speed broadband network.

ISDN allows complete 64 Kbps per channel transmission speeds to maximize the efficiency of your applications.

Use the ISDN channels for computer-to-computer communication, in addition to video conferencing which uses various speeds of n*64 kbps.

Benefits of buying ISDN from Telenor Global Services
- Direct route quality worldwide
- Dedicated quality management team
- Carefully selected and tested partners/suppliers
- Guaranteed CLI to numerous destinations
- 24/7 Fault Management
- Pro-active fault handling
- Competitive and stable pricing
- Up to date numbering plans

Overview:
- ISDN connections to numerous countries
- The ISDN network carries transmission of voice, data and video signals at high speeds and improved quality for fast Internet access and CLI
- ISDN allows complete 64 Kbps per channel transmission speeds
- ISDN channels can be used for both computer-to-computer communication and video-conferencing
